

I am concerned about the high level of interference that the test systems are generating on the Amateur Radio Frequencies. The interference can be over S9 and will severely disrupt traffic handling (emergency service) nets as well as general Amateur operation. An additional concern is the potential that our legitimate operation could easily cause interference to the BPL. If this happens, my neighbor will not care that it is the responsibility of the utility to accept interference, my neighbor is going to blame me. If you must approve this technology, at least require them to notch out the Amateur Frequencies and force them to react quickly to complaints of interference with Amateur Radio. Thank You,

Doug Phelps
